

# ReadmeGenerator

Automatically generate a README.md file for your github repository just by inputting your github username and answering questions about your application..

## Table of Contents

- 1 - node\_modules files.
- 2 - Javascript index.js.
- 3 - package-lock.json (dependencies).
- 4 - package.json (dependencies initializer).

## Installation

\* Clone the repository and run npm install in the parent directory to install dependencies, then simply run your application using node index.js in the console of your IDE..

## Instructions

\* After running node index.js in your cloned repo parent directory you will be prompted with questions in the console, answer them to best suit your application description; When prompted with a checkbox list use space to select and ENTER when done. (when finished answering all questions your README.md should be generated..

## License

\* OSI.

## Contributors

\* None at the moment..

## Tests

\* This file was generated using ReadmeGenerator.

## Written In

\* Javascript.

## Questions

N/A @@@some questions
